USER INTERFACE DEVELOPMENT

SCHOOLWORK 4

LO4
Max: 3 points
Duration: 15 min

- All materials for the schoolwork can be found in the folder **UID_Assignment_LO4.**

- Once you have completed the task, send the solution as a zipped file to luka.postruzin@algebra.hr.

- The name of the zip file must be in the following format:

  Assignment4_<student name><student surname>.zip

[Minimum - 1 point, Desired - 2 points]

Expand the existing CSS file **styles_boot.css** with the following requirements:

1. **Add a Transition:**
   o Make the article element change smoothly when hovered. Specifically:
      - Change the background-color of the article to **lightgray (#d3d3d3)**.
      - Increase the font size of the article text to **18px** when hovered.
      - The changes should transition smoothly within **500ms**.

2. **Add an Animation:**
   o Animate the <h2> headings inside the article elements to change color repeatedly. Specifically:
      - Create an animation that alternates the text color between **dark blue (#253858)**, **dark red (#a90202)**, and **dark green (#1b7831)**.
      - The animation should last **3 seconds**, alternate direction every time it loops and loop infinitely.

Hints:

- Use the animation-direction: alternate property to make the animation alternate its direction or insert alternate into animation shorthand property.

- You can chain multiple transition properties by separating them with commas, specifying each property's duration, timing function, and delay individually. For example: *transition: color 500ms ease-in-out, font-weight 300ms linear;*
